

**MICHAEL ADDITION PRODUCTS OF AMINE TERMINATED POLYOLEFINS  
AND POLYFUNCTIONAL ACRYLATES**

**ABSTRACT OF THE DISCLOSURE**

5        Adducts of polyfunctional acrylates and amine terminated polyolefins are provided. The adducts are prepared via a Michael addition reaction of the acrylate and the amine terminated polyolefin. The resultant adducts can be further polymerized with acrylic monomers via free radical or radiation curing mechanisms or quaternized to improve dispersion in aqueous systems.
